PROJECT UNDERSTANDING & COSTING PROPOSAL

Jewellery ERP & Digital Storefront

Prepared for: M/S Radharani Jewellery Works

Thank you for sharing your detailed requirements with us. This document summarises our understanding of what you need, clarifies a few important scope points, shares the development cost, and lists a few open questions we need your input on before we finalise the plan.

1. What We Have Understood - Requirement Catalogue

Based on your notes, here is the catalogue of features and workflows we understand your project needs:

A. Inventory & Stock Tracking

- Three-level stock structure: Item → Packet → Box, reflected across all screens.
- Box / Packet assignment via scanning, manual entry, or Excel/CSV upload.
- Vault ↔ Counter movement tracking with QR scan-in/scan-out, timestamp, and staff name.
- Karigar (craftsman) dispatch & return tracking - for production and repair work.
- Hallmarking centre dispatch & return tracking.
- Photography dispatch and other custom-purpose tracking (admin can add new purposes).
- Photo upload of items/bills at hand-off points, auto-removed after 3 months.
- Custom / order-based product tracking with pending-order reminders.
- Old Gold/Silver exchange workflow: received → melted → tested → valued → credited to customer ledger.

B. Owner Dashboard & Reporting

- Real-time, mobile/tablet/laptop-accessible dashboard showing live location of every item.
- Daily transaction logbook covering all movements and sales.
- Product / Packet / Box history with a minimum 6-month timestamped log.

C. Sales / Billing

- Billing screen with HUID / barcode scanning (multi-item supported).
- Daily manual gold & silver rate entry with a last-updated timestamp.
- Auto-generated, copyable sales text message for customers.
- Support for making charges (per-piece and percentage-based), GST, add-on charges, and discounts.

D. Customer & Growth Features

- Loyalty points programme for repeat purchases and referrals.
- Monthly instalment/savings scheme with customer login access.
- Gold / Silver price and exchange simulator.
- Bulk customer data migration from your existing Tally ERP records.

E. Digital Storefront (E-commerce Display)

- A catalogue-style website showing live stock, pricing, and current offers/schemes.
- Purpose: to inform and guide customers before they visit the store - not to process transactions online.

2. Important Scope Clarification: No Online Payments

> **This project will NOT include any payment gateway or payment-processing integration of any kind.**
>
> The website will only display product information, live pricing, and ongoing offers. All sales, payments, and deliveries will continue to happen through your store, exactly as they do today.

3. Inventory Management - Our Commitment

A core part of this project is building a proper, reliable Inventory Management System with solid tracking of every item as it moves through your business - vault, counter, karigar, hallmarking, photography, or any other stage. Every movement will be timestamped and linked to the responsible staff member, giving you a complete, auditable trail for every single item at all times.

4. Development Cost

Item	Amount
Development Budget (ERP + Inventory Tracking + Digital Storefront, as scoped above)	**₹50,000**

This is fixed as the solid development budget for the scope of work described in Section 1.

Hosting & Server Costs (Additional)

- Hosting and server charges are separate from the development budget above.
- Since the project involves image-heavy product data, the hosting plan will include good, adequate storage sized for media/image needs.
- Pricing includes an introductory offer; rates may increase upon renewal after the selected term.

Term	Cost (with offer)
1 Year	**₹3,101**
2 Years	**₹5,069**
4 Years	**₹8,439**

Note: Prices may increase after the selected term ends, upon renewal.

Company Email Setup

- **Domain:** ***radharanijewellery.in***
- 1st year: ₹1,200 - includes domain registration + 2 mailboxes.
- From year 2 onward: ₹899/year renewal, plus ₹1,200/year per mailbox for any mailboxes beyond what's covered in renewal (₹2,400/year for 2 mailboxes).

Note: The server hosting and domain pricing mentioned above is based on Hostinger's current shared hosting plans; you're welcome to verify these rates independently. No separate charge has been added for sourcing/setting this up; this effort is covered within the development cost itself.

5. Questions for You - Before We Finalise

To scope the remaining pieces accurately, we need a little more clarity from your side:

Q1. Facebook & Instagram - what exactly are you planning to use these for (e.g. posting product photos, running ads, catalogue sync), and how do you want them connected to the system?

Q2. WhatsApp integration - what level do you need? Just sending manual/copyable messages, automatic notifications (order reminders, receipts, scheme updates), or a full WhatsApp Business API setup?

Q3. Live chat - what level of live chat are you expecting, and where should it be available (only on the website, or also across WhatsApp/Instagram/Facebook)?

> **A quick note on Facebook, Instagram, WhatsApp & Live Chat integrations:**
>
> These are all third-party platform integrations, and building them properly is time-consuming - they will add to the development timeline and cost beyond the base budget above.
>
> That said, this can often be achieved faster and more affordably using ready-made tools such as WATI (for WhatsApp) and similar platforms for chat/social integration. We will share the costing for this option separately once we understand your requirement better from the answers above.

If you have any other doubts or questions about anything in this document, please feel free to ask - we're happy to clarify before we move ahead.

We look forward to your confirmation so we can move ahead with the next steps.

*We will discuss the **digital marketing strategy today at 8:00 PM** for further planning and execution.
We'll finalize the key action points, campaigns, and execution plan during the discussion.

Warm regards,

Irfan Ansari
